

APPROACH

DORIUM is an **Alternative Economic System** that **rewards social improvement**, generates a **new kind of digital money**, and is **collectively governed by all participants**.

Reward System

Solving social problems has value - socially and also economically. Anyone who solves a social problem or helps others to do so receives **digital Value Tokens as a reward**. The respective number of Value Tokens is determined by all participants voting together. The achievement of the improvement is verified and confirmed by selected participants. The Value Tokens carry the social and economic value of the improvement. The participant can show the received Value Tokens in their online profile of the DORIUM community.

Digital Money - SoBz

Value Tokens earned by participants can also be used to create new units of a digital currency (**SoBz**). Behind each unit of the new money is a piece of improvement as well as its value to the community. Accepted globally by all DORIUM participants, the money enables sustainable growth and development.

Decision Making and Governance

DORIUM is a decentralized system that is controlled and managed only by the participants. The right of co-decisionmaking depends exclusively on the respective experience of the individual participant. With each new experience, all members of the DORIUM community collect **Experience Tokens** that give them more say.

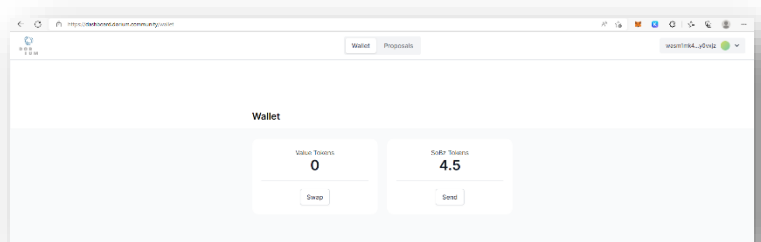

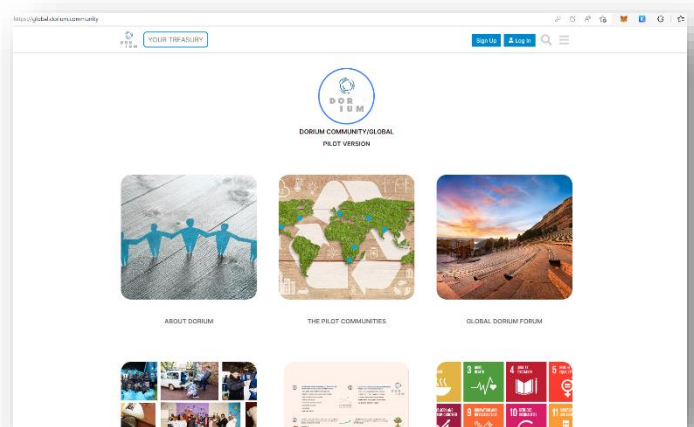

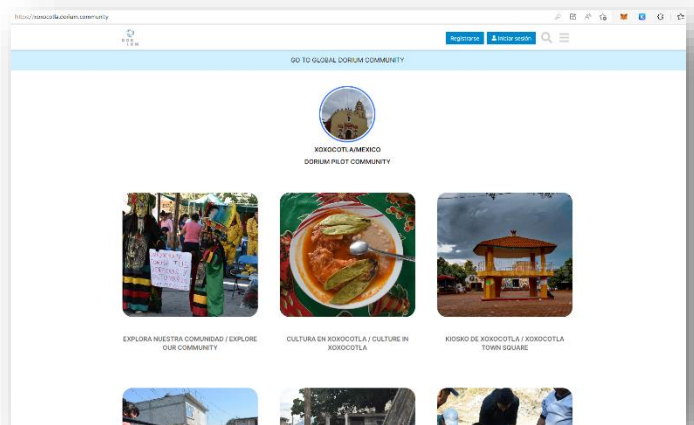

IMPLEMENTATION

On their own **local websites**, all participating Local Communities present themselves - their beauty, culture, challenges, successes, their **local SDG status** and ongoing projects.

A **web portal of the global DORIUM Community** connects to the Local Communities and presents all the ongoing projects. Here, participants can support the projects with their experience and learn more about the Local Communities and the **global SDG status**.

With the **DORIUM wallet**, all users can participate in voting and manage their digital tokens in a **blockchain wallet**.

ADVANTAGES

For **all participants**: the global DORIUM community **rewards, promotes and supports local social projects**.

For **Local Communities**: every new Value Token means improvement and **local development**.

For **businesses**: The new payment token creates **local purchasing power and local growth**. Its acceptance

- promotes social and economic **value creation**,
- meets the **CSR requirements** of participating companies,
- is a **positive advertisement** for them, and
- opens up **new markets** for sustainable and innovative products.

For **impact investors**: buying SoBz on a crypto currency exchange, impact investors invest in the successes and values already achieved and confirmed, but **without the usual project risk** (mismanagement, corruption).
